## EMPLOYMENT

---

### Zoom — Software Engineer

May 2022 – Present

*Remote*

*Promoted from ZP2 to ZP3*

- Joined as a founding engineer on Zoom's Workforce Management (WFM) product before general availability and owned full-stack delivery — TypeScript, React/Next.js, GraphQL, and Prisma/MySQL — as it scaled into a business generating \$1M+ in monthly recurring revenue
- Designed and built rule-driven automation and multi-step approval workflows (schedule swaps, time off, shift offers), applying policy modeling, event-driven architecture, and conflict/overlap validation to replace manual review while protecting data integrity at scale
- Implemented permission-aware, multi-role access control — fine-grained permissions, data isolation, and audit logging — to meet compliance requirements and support safe, feature-flag-gated releases; recognized as a Security Champion for driving secure-by-design practices across the team
- Partnered cross-functionally with product and QA throughout the SDLC, authoring PRDs and technical specs, driving Vitest/integration test coverage, and resolving release-blocking defects to ship reliably in a fast-moving SaaS environment

### Solvvy — Senior Solutions Engineer

Jan. 2022 – May 2022

*Remote*

*Acquired by Zoom*

- Partnered directly with customers to diagnose issues and translate feature requirements into tailored solutions that addressed their operational needs
- Coordinated with Support to triage and resolve customer issues within SLA windows, keeping accounts unblocked and escalations controlled
- Collaborated with Account Executives on proofs of concept that demonstrated product value and supported customer adoption, sales, and renewals

### WalkMe — Senior Solutions Engineer

Jan. 2021 – Jan. 2022

*New York, NY*

- Led post-sale solution design and implementation for enterprise clients in partnership with Project Managers, delivering production WalkMe experiences across complex SaaS environments
- Analyzed user engagement metrics across delivered solutions and iterated on content strategy to drive adoption and sustained product usage
- Conducted Q&A, onsite, and screen-share training sessions; advised stakeholders on process improvements that strengthened platform performance

### WalkMe — Solutions Engineer

Mar. 2019 – Jan. 2021

*New York, NY*

- Partnered with Sales and Account Managers to build proofs of concept and provide technical support that demonstrated clear ROI for prospective and existing accounts
- Successfully implemented WalkMe solutions for 10+ enterprise accounts, including PepsiCo, Monsanto, and Fidelity

## SKILLS

---

**Programming:** TypeScript, JavaScript, Node.js, React, Next.js, GraphQL, Fastify, Apollo Server, Prisma ORM, MongoDB, Redis, SQL, HTML/CSS, RESTful APIs, Kafka, Feature Flagging, Turborepo, Vitest, Tailwind CSS, Git, Unix/Bash

## EDUCATION

---

### Kent State University

*B.B.A. Finance*

June 2010 – Dec. 2012

### General Assembly

*Certificate: Web Development Immersive*

June 2018 – Sept. 2018

## PROJECTS

---

### HassenCo — Full-Stack E-Commerce Platform

2025 – Present

[github.com/shassen/hassenco](https://github.com/shassen/hassenco)

Designed and built HassenCo, a production-grade e-commerce platform for a premium handmade leather goods brand.

Architected a TypeScript monorepo (Turborepo) with a Fastify/Apollo/TypeGraphQL API, Next.js 16 storefront, and MongoDB/Prisma data layer. Implemented JWT authentication with role-based access control, anonymous-to-authenticated cart merging, GraphQL Codegen for end-to-end type safety, admin product/order management with image upload, and a Vitest test suite with GitHub Actions CI.

- Built end-to-end type safety from Prisma schema through TypeGraphQL to GraphQL Codegen-generated typed React Apollo hooks
- Implemented session-based anonymous carts with server-side merge into authenticated user carts on login
- Hardened the GraphQL API with IP rate limiting, CORS, and structured Pino logging with per-request IDs
- Delivered an admin dashboard for product, category, and order CRUD with JWT-protected image upload
- Wrote ~2,000 lines of Vitest unit tests across seven service modules and wired CI via GitHub Actions

**Tech:** TypeScript, Next.js 16, React 19, GraphQL, Fastify, Apollo Server, TypeGraphQL, Prisma, MongoDB, Turborepo, Tailwind CSS 4, Vitest, GitHub Actions, JWT/RBAC
